Cuevik Plugins — Overview

Plugins Cuevik Start, Cuevik Ship, Cuevik Docs

Author Viral Parikh

Claude Code plugins that take a software project from an empty folder to delivered work, with every document and change reviewed and approved by a person before it counts.

What you get

Cuevik Start

Set a project up the governed way. Nine guided steps take an empty repository to an approved product concept, requirements, architecture, tech stack, AI coding rules, README and backlog.

Cuevik Ship

Deliver one piece of work at a time, from idea to reviewed code: brainstorm, requirements check, backlog, plan, design and build.

Cuevik Docs

Keep the documents that define the project honest: audit them for gaps, contradictions and repeats, and change any of them through the same review.

How it works

- **Reviewed, not trusted.** Every step ends in a change that a person approves. Nothing counts until it is approved.
- **One step at a time.** Each command does one job and will not run until the step before it is approved.
- **Clear ownership.** Each document has a named owner and reviewers, so the right person signs off. On a small team one person can hold both roles.
- **Built on GitHub.** Works with your GitHub repository and project board.

Who signs off

Product Owner

Owns what gets built: the product concept, the requirements and the backlog.

Architect

Owns how it gets built: the architecture, the technology choices, the AI coding rules, the README and the project's working rules.

Every command

Cuevik Start

Command	What it does
`/cuevik-start:00-bootstrap`	Connects your GitHub repo and sets the working rules.
`/cuevik-start:01-product-concept`	Captures what the product is, who it is for and why.
`/cuevik-start:02-product-requirements`	Turns the concept into clear, testable requirements.
`/cuevik-start:03-architecture`	Designs how the system fits together, and why.
`/cuevik-start:04-tech-stack`	Chooses and locks the technologies to be used.
`/cuevik-start:05-ai-tool-guide`	Sets the rules AI coding assistants must follow.
`/cuevik-start:06-readme`	Writes the project's front page, ready to share.
`/cuevik-start:07-backlog`	Breaks the requirements into a prioritised backlog.
`/cuevik-start:08-finalize`	Hands over the permanent rules and closes out setup.
`/cuevik-start:status`	Shows how far project setup has got.
`/cuevik-start:cleanup`	Tidies up after setup is complete.

Cuevik Ship

Command	What it does
`/cuevik-ship:01-brainstorm`	Explores a new idea and decides whether it goes ahead.
`/cuevik-ship:02-audit-prd`	Checks the idea against the requirements.
`/cuevik-ship:03-create-backlog`	Turns approved requirements into tracked work.
`/cuevik-ship:04-plan-intent`	States the problem and scope before any solution.
`/cuevik-ship:05-design-spec`	Writes the detailed design: behaviour, data and tests.
`/cuevik-ship:06-build-plan`	Turns the design into an ordered list of tasks.
`/cuevik-ship:07-execute-plan`	Builds the plan and delivers it for review.
`/cuevik-ship:cleanup`	Tidies up once the work is delivered.

Cuevik Docs

Command	What it does
`/cuevik-docs:audit`	Reviews documents for gaps, contradictions and repeats.
`/cuevik-docs:update`	Changes a core document through the same review.
